PROJECTS

ExcapedTheRatRace | Freelance Front-end developer/UI design **Jun 2024–Mar 2025**

- Developed a website for people to become job-free by booking an appointment with the advisor through the booking site.
- Visualized a storyboard on how the client's investors book an appointment. Created wireframes and a moodboard for the content and design layouts.
- Designed and implemented the moodboard and wireframes by deploying a website live. Optimized loading speed, browser performance, and screen size compatibility through Lighthouse. Maintained the website for some updates and changes to the content.

FAVE Pizzeria | freelance logo designer **May 2024–June 2024**

- Designed a logo for their small business so they would be remembered by their customers through their brand.

Autism Today Website Redesign (Capstone Project) | Front-end developer **Sept 2022–Dec 2022**

- Developed a website where autistic people will appreciate their talents/efforts from everyone without insulting them due to their differences
- Created a mood board to show the design of the interface, and followed the style guides and brand guide that the client wanted. Also made a storyboard of how the website will flow when users visit. Sketched and produced low and high-fidelity wireframes to show and discuss alternative solutions for what they will need in the future.
- Developed, coded, and designed in WordPress and SASS, with various useful plugins to create a user-friendly site and a functional, essential user interface.

Mouthwatering Soybeans (school project) | SEO analytics **Oct 2021–Dec 2021**

- Created content and advertised a simple website through banner and social media posts.
- Improved SEO tactics by putting essential keywords that users can easily see when they type certain keywords on search engines.

Stocky (school project) | Front-end developer **Oct 2021**

- Developed a prototype for stock photos that a user can download or submit to get rewards

- Optimized images to load properly on different browsers. Redesigned based on the instructions written by implementing the different viewports.
- Analyzed loading speed and browser compatibility performance through Google Lighthouse.
